

Non-Function Requirements

- Individual tours can also send their major of interest with them, so a proper guide is assigned
- During form filling for a tour, the system also shows which days and hours are the most busy. So institutions can choose better.
- Automatic duplicate form catching system. If all information is the same the tour is not filled and this is shown to the form filler.
- If the same highschool fills many tour requests with different dates-hours, this is caught by the system, tours are still taken but shown as duplicate for users.
- High schools that are saved as "Preferred" and "Focus" can apply for more tour requests.
- Automatic sorting for high school tours. For sorting by "Default", "Preferred" and "Focus" schools are shown first. Then schools from other cities, and the rest.
- Once a tour is completed and confirmed by the advisor, the system should automatically calculate and assign points (puantaj) to the guide's statistics based on predefined rules (hours worked etc.)
- The system should automatically update each guide's performance metrics on the dashboard after each completed event. Metrics may include the total number of tours conducted, points earned, and feedback received.
- The dashboard statistics should refresh automatically every 5 minutes to show the latest data without requiring a manual refresh.
- Assigned tours page for guides, they can see which events they assigned to and which of them are accepted from one location.
